

VERIFIED EVIDENCE -> ENFORCEABLE POLICY

When risk crosses chains, policy moves with it.

AIR turns finalized incident evidence on Ethereum into enforceable spending constraints on Creditcoin.
AI may recommend a stricter response; contracts keep authority.

VERIFY THE BLOCKED PAYMENT

THE FALSIFIABLE STORY

- NORMAL / STATUS 1

baseline payment succeeds
- FROZEN / STATUS 0

same payment class is rejected
- RESTORED / STATUS 1

payment succeeds after recovery proof

LIVE PRODUCT SURFACE | PUBLIC RECEIPTS | NO WALLET REQUIRED TO VERIFY

SECURITY TOOLING SEES RISK. TREASURY POLICY STILL NEEDS TO MOVE.

The dangerous part is the handoff.

Alerts can be excellent while emergency action remains fragmented across dashboards, chat, signers and downstream systems. AIR makes that handoff explicit and inspectable.

KEEP THE MONITORING, HUMAN SIGNERS, MULTISIG AND TREASURY. REPLACE THE FRAGILE INCIDENT GLUE.

ONE PAYMENT CLASS. THREE STATES. DIFFERENT RESULT.

Receipts, not screenshots.

The spending path itself changes. Each state below is backed by a public Creditcoin transaction.

BEFORE

NORMAL

STATUS 1

Payment succeeds

0xba66...b811

DISTRESS

FROZEN

STATUS 0

Payment rejected

0x752f...548c

RECOVERY

RESTORED

STATUS 1

Payment succeeds again

0x3e7c...b046

THE SAFETY RESULT

Proven incident -> payment stops. Proven recovery -> payment moves again.

A SIMPLE FLOW WITH EXPLICIT AUTHORITY

Verify. Constrain. Recover.

The current source signal is deliberately narrow: an objective protected-treasury balance threshold.

01 / VERIFY

Prove the source event.

Operator / guardian triggers evaluation.
Finalized source evidence is proved and
relayed through the Attestcoin / ASC path.

02 / CONSTRAIN

Apply the safety floor.

WARNING -> LIMITED. CRITICAL -> FROZEN.
A bounded model may strengthen a WARNING
to FROZEN; an authorized responder signs.

03 / RECOVER

Demand causal recovery.

The protected path stays constrained until
separate verified recovery evidence is
accepted and NORMAL can return.

NO ADMIN TOGGLE OR MODEL OPINION CAN RESTORE NORMAL.

USEFUL JUDGMENT WITHOUT SOVEREIGN AUTHORITY

AI can strengthen the response. It cannot become the authority.

The deterministic floor remains valid if the model is wrong, offline, malformed or overconfident.

THE MODEL MAY

- + Recommend LIMITED or FROZEN from supplied evidence.
- + Strengthen WARNING from LIMITED to FROZEN.
- + Expose a bounded rationale and uncertainty.

THE MODEL MAY NOT

- X Weaken deterministic policy or clear recovery.
- X Choose beneficiary, calldata or spending destination.
- X Sign authorization, move funds or invent verified facts.

DESIGN RULE: AI MAY ONLY MOVE WITHIN AN ALLOWED, STRICTER-OR-EQUAL CONTAINMENT ENVELOPE.

CROSS-CHAIN TREASURY OPERATIONS

Where AIR earns its place.

AIR is strongest when risk is observed on one chain and protected value is governed on another.

PROTOCOL TREASURIES

SOURCE RISK SHOULD CHANGE DESTINATION PERMISSIONS.

For teams that hold or route value across networks and need treasury policy to react to verified source-chain state.

CROSS-CHAIN INFRA

CONTAINMENT SHOULD TRAVEL WITH PROOF.

For operators whose guarantees depend on finalized state elsewhere and need proof-bound action instead of manual coordination.

SECURITY + RISK

USE AI JUDGMENT WITHOUT GIVING IT THE KEYS.

For responders who want evidence-aware escalation while keeping signing, policy floors and recovery outside model authority.

INITIAL WEDGE: VERIFIED INCIDENT CONTROL FOR CROSS-CHAIN TREASURY OPERATIONS.

KEEP YOUR STACK. REPLACE THE INCIDENT GLUE.

Verification between detection and enforcement.

AIR carries verified incident state across chains without asking the model to own custody or policy.

PUBLIC PROOF. BOUNDED AUTHORITY. INSPECTABLE RECEIPTS.

Built to be verified, not merely described.

The technical packet makes proof, authority, and recovery boundaries directly inspectable.

PUBLIC PROOF

- + public receipts expose each state transition
- + same payment succeeds, stops, then succeeds again
- + separate verified recovery required for NORMAL
- + core proof is inspectable without a wallet or model key

OPERATING MODEL

- operator / guardian triggers evaluation
- objective protected-balance source signal
- AI may strengthen containment, never weaken it
- separate verified recovery restores NORMAL
